

Sessions 1:

Q1. Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm)?

A **program** is a set of instructions written in a programming language that tells a computer what to do. It takes input processes and produces an output to perform a specific task. Use the Instagram the program behind it helps upload photos, apply filter and show posts from the user. These actions happen because the app's program is designed to handle user inputs and display the correct result on your screen.

Q2. List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.
Hint: Think of languages like Java, Python, and JavaScript?

Java:-

Type both (compiled + Interpreted)

Java code is first compiled into byte code, then interpreted by the Java virtual machine (JVM).

Python:-

Type interpreted.

Python code is usually executed line-by-line by an interpreter, making it easy to test and debug.

Javascript:-

Interpreted

Javascript is mainly interpreted in browser, but modern engines use JIT (just-in-time) compilation for better performance.

Q3. Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

Q4. Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

Algorithm : order food on swiggy :-

1. Start
2. Open the Swiggy app on your mobile phone
3. Login or sign up using your account
4. Enter or confirm your delivery location
5. Browse or search for a restaurant
6. Select a restaurant from the list
7. View the menu items
8. Select the desired food items
9. Add selected items to the cart
10. Review your cart (items, quantity, price)
11. Click on “Proceed to Checkout”
12. Apply any available coupon (optional)
13. Choose delivery address
14. Select payment method (UPI / Card / Cash / Wallet)
15. Confirm and make payment
16. If payment is successful, order is placed
17. Receive order confirmation notification
18. End

Sessions 2:-

Q1. Install GCC on your computer and verify the installation by running `gcc --version` in your terminal or command prompt.

Install gcc:- `sudo gpt update`
`Sudo apt install build-essential`

Installation :- `gcc ---versions`

Expected output :- `gcc (GCC) 13.2.0`
